1. INTRODUCTION

We present to you next version of CMS mobile system with many new functions and modules. Many of these changes is the effect of our cooperation with You and our Partners. Part of them are our ideas which extend capabilities of digital video recording. Please pay your attention to the possibilities of simultaneous image recording from network cameras and, widely used so far, analog cameras, developed archives and wider capabilities of controlling the whole system.

1.1 SYSTEM DESCRIPTION

NET PRO is a digital video recorder designed for cooperation with CCTV cameras. It uses PC class computers which work under control of Microsoft Windows VISTA/7 operating system. New NET PRO system version can record image from up to 32 cameras, servicing 32 output switches and 32 alarm inputs. Moreover the system can be hybrid, that is one system can service both analog and IP cameras – thanks to this it is possible to upgrade an existing installation and add IP or analog cameras. Managing the video server through the network is possible. Program allows wide possibilities of motion detection settings, searching the motion in archives, servicing alarm events. Differential image-compression method guarantees image recording longer than in other systems of that type without changing the image quality and storage space.

Software for managing CMS MOBILE system consists of two independent applications:

1. NET PRO (*Video Digital Recording - Server*)
2. CMS PROFESSIONAL (*Client*)

The first application is a server: processes image from the cameras, manages user accounts, tasks, controls the cameras. The second one is used as a client. We can connect to the server by a local network and do remote monitoring. Client application is available on mobile devices (mobile phones, Pocket PC) which allows access to camera images from any place in the world.

2. RUNNING THE APPLICATION AND INTERFACE DESCRIPTION

The program is designed to work with the Apple Iphone OS, and works with phones equipped with that system. This user's manual is based on program version 1.15 CMS MOBILE installed on Iphone 3G. This program can be downloaded free of charge from Apple Store or iTunes.

The main camera window is shown below.

Main screen displays the cameras picture.

Name, model and FPS is being displayed in the top

In the bottom there is all the option available with just one touch.

Down right side show actual hour

Picture 1: Program's main window

3. USING THE APPLICATION

3.1 BASIC OPTIONS

Picture2: Basic program options

After program start, in the main window, the following options are available.

- Connect – opens the address book with the list of defined NET PRO servers and establishes connection with selected one
- Camera - opens the list of active camerass
- In out – additional input alarms, and output switches
- Settings – additional program settings
- Snapshot – makes snapshot of viewed image and saves it on mobile
- Play – open archives
- About – information about the program version, manufacturer, etc.
- Zoom In and Zoom Out – optical zoom

3.2 ESTABLISHING THE CONNECTION

Selecting the **Connections** option opens the address book with the list of NET PRO servers.

Select the server just by clicking on the address on the screen.

The Internet connection should be configured according to the information you have received from your GSM provider.

After the connection is established picture from the 1st camera will be shown.

Picture3: Establishing connection

Picture4: Connection established

3.3 ADDITIONAL OPTIONS DURING THE CONNECTION

During the active connection with server, the following additional options are available.

- Connect – opens the address book with the list of defined NET PRO servers and establishes connection with selected one
- Camera - opens the list of active camerass
- In out – additional input alarms, and output switches
- Settings – additional program settings
- Snapshot – makes snapshot of viewed image and saves it on mobile
- Play – open archives
- About – information about the program version, manufacturer, etc.

Picture5: Additional options during connection

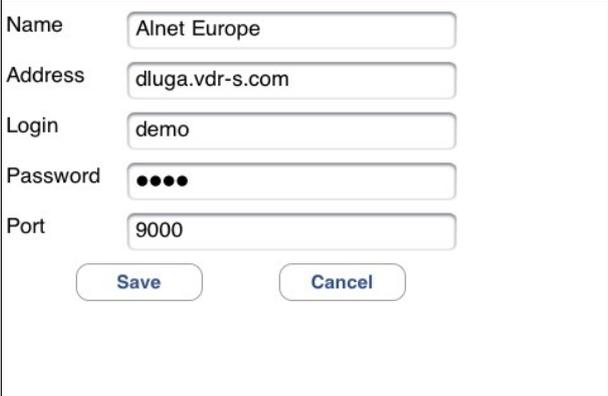

ATTENTION: the number of available cameras, alarm inputs, relay outputs, etc. depends on connected user's rights.

3.4 MANAGING THE ADDRESS BOOK

In the main program window select Connections – the address book management menu appears:

- Add address – adding the new entry 
- Change – editing the existing entry 
- Remove – deleting the entry from address book 

Name	<input type="text" value="Alnet Europe"/>
Address	<input type="text" value="dluga.vdr-s.com"/>
Login	<input type="text" value="demo"/>
Password	<input type="password" value="••••"/>
Port	<input type="text" value="9000"/>
<input type="button" value="Save"/> <input type="button" value="Cancel"/>	

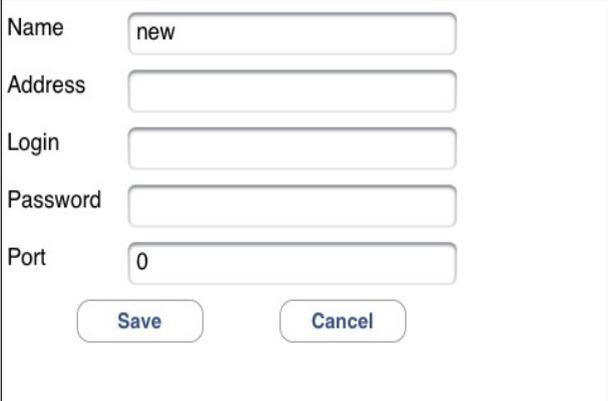

Picture6: Managing the address book

Select the option just by clicking on it.

3.4.1 ADDING THE NEW ENTRY TO THE ADDRESS BOOK

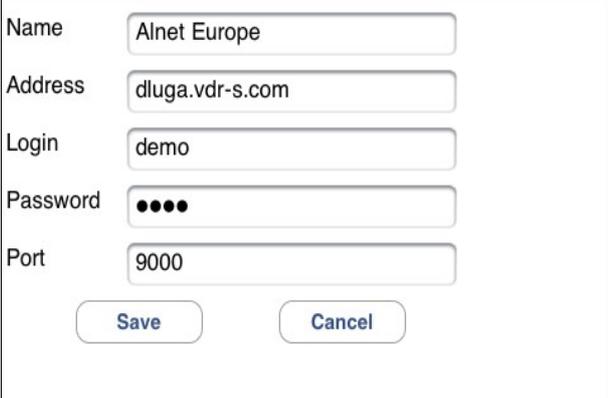

Select the **New** 

- **Name** – enter the connection name
- **Address** – enter the server address
- **Login** – enter the user's login name
- **Password** – enter the user's password
- **Port** – enter the server port

Name	<input type="text" value="new"/>
Address	<input type="text"/>
Login	<input type="text"/>
Password	<input type="password"/>
Port	<input type="text" value="0"/>
<input type="button" value="Save"/> <input type="button" value="Cancel"/>	

Picture7: Adding the new entry to the address book

Name	<input type="text" value="Alnet Europe"/>
Address	<input type="text" value="dluga.vdr-s.com"/>
Login	<input type="text" value="demo"/>
Password	<input type="password" value="••••"/>
Port	<input type="text" value="9000"/>
<input type="button" value="Save"/> <input type="button" value="Cancel"/>	

Picture8: Editing entry in address book

3.4.2 EDITING THE ENTRY IN THE ADDRESS BOOK

Select **Change** Option

Available options are identical to described above (see 3.4.1 **Adding the new entry to the address book**).

Del button – deletes the field content

Return button – a new submenu appears:

1 Save – saves the changes and returns to the previous menu

2 Cancel – cancel changes

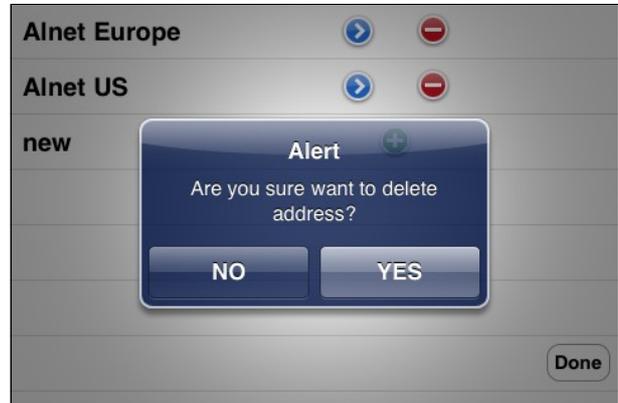

Picture9: Changes while editing the contact

Name	<input type="text" value="Alnet Europe"/>
Address	<input type="text" value="dluga.vdr-s.com"/>
Login	<input type="text" value="demo"/>
Password	<input type="password" value="••••"/>
Port	<input type="text" value="9000"/>
	<input type="button" value="Save"/> <input type="button" value="Cancel"/>

Picture10: Editing the entry in the address book

3.4.3 DELETING THE ENTRY FROM THE ADDRESS BOOK

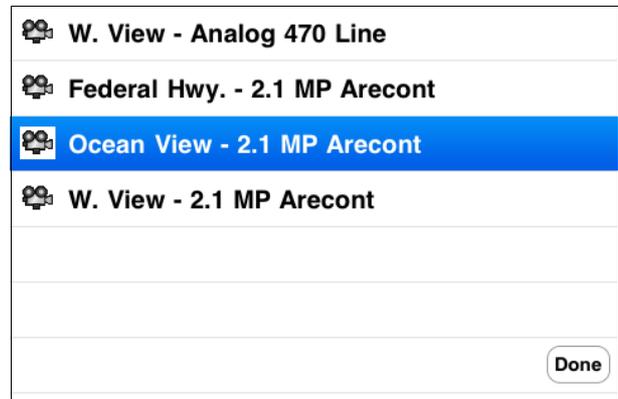

In order to delete an entry from the address book press  button. A confirmation window will be displayed.

Picture11: Deleting the entry from the address book

3.5 SELECTING THE CAMERA

During the connection select **Camera**. The list with available cameras appears – select the camera by clicking in the screen.

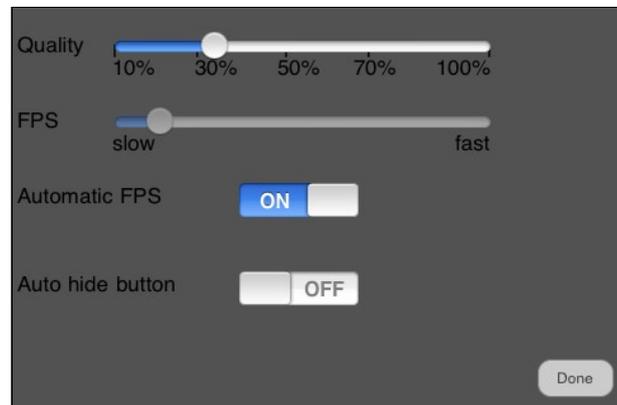

Picture12: Selecting the camera

3.6 PICTURE QUALITY AND DATA TRANSFER SETTINGS

During the connection press Settings.

A window with quality and data transfer settings appears:

- Quality – setting the displayed picture quality.
- Frame per second – setting up the data transfer.
- Automatic FPS – automatically adjust FPS (Frames per seconds) to available connection speed.
- Auto hide button – hides menu buttons.

Picture13: Picture quality and data transfer settings

Available quality values:

- **10 %** - Very Low
- **30 %** - Low
- **50 %** - Medium
- **70 %** - High
- **100 % (Max Quaility)**

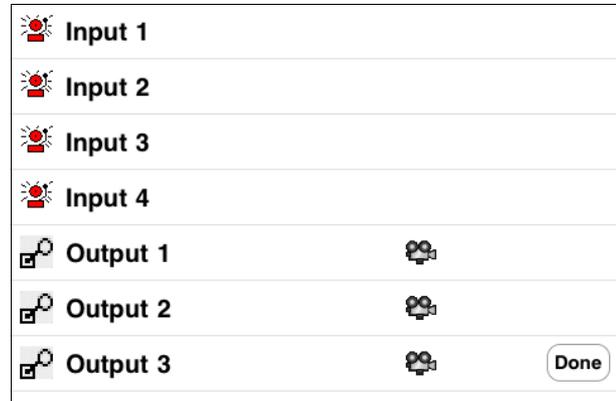

Attention: This client program is developed and optimized to work with NET PRO / Netstation 3.x.x.x Version servers. Moreover, while connecting with 2.x.x.x is not guaranteed.

3.7 CONTROLLING THE OUTPUT SWITCHES AND ALARM INPUTS

During the connection, select In out – the list with available output switches appears. The icon describes inactive output/input switch, while the icon means, that the output/input switch is active.

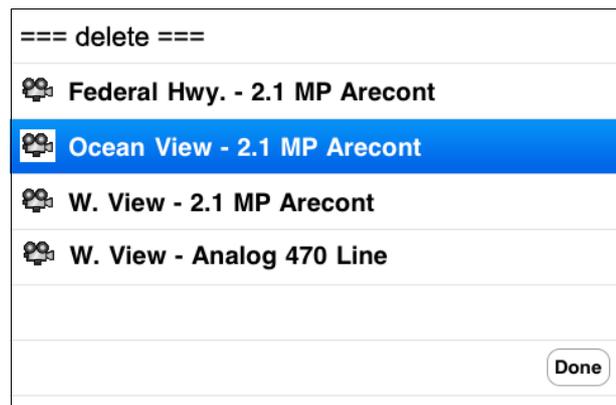

To change between active / inactive state of the input/output switch, select it by clicking on the screen (after change, the inputs and outputs list remains open).

Picture14: Controlling the output switches

You can attach one of the outputs to a camera.

This way you have quick access to selected output while viewing the camera. (see attached Picture 16. Output 1 is attached to camera 1)

Picture15: Selecting the camera

As the result there is additional button. After pressing, the right command is activated.

Picture16: Attached output

3.9 ARCHIVE

During the connection, press 'Play' on your Iphone screen. A new window appears, where the date and time parameters of the archive recordings should be set.

In Archives

- Rev – plays backward
- Play – play forward
- Stop – stop the display
- Set – set new date / time
- Exit – exits the archive/back to camera view.

Picture17: Archive recordings – date parameters

After selecting the date/time starting point, select the play mode – the recordings from selected camera will be displayed. The camera can be changed by moving the finger on the screen from left to right. Additionally, the recording time will be displayed.

The archive display mode can be changed by selecting Multiview moving the finger from bottom to up with straight line. To go back press the right camera.

In the archive mode there's a Digital Zoom function available – see chapter **3.11 – Zoom**.

Picture18: Archive recordings - playing

3.10 PTZ CONTROL MODE

During the connection, select the camera with PTZ label – option is available only if the active camera is the PTZ camera, and the connected user has the rights to control it.

The PTZ is controlled with moving around the borders of the screen – each move causes the PTZ movement in desired direction.

Controlling the **Zoom** (see **3.11 – Zoom**)

Picture19: PTZ control mode

3.11 Zoom

During the connection, press and hold diagonal of the area that you want to zoom in. Double click returns to original size

The functionality of **Zoom** mode depends on the type of active camera:

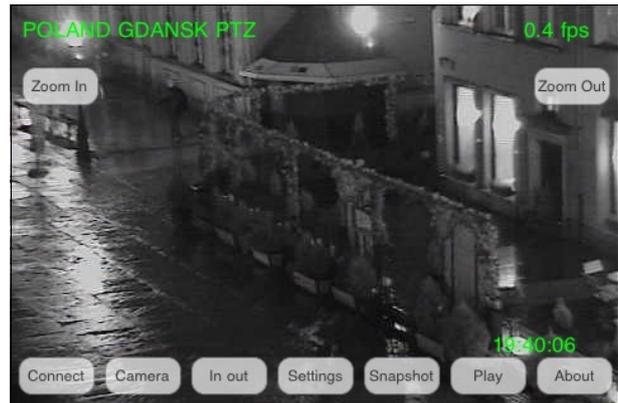

- Cameras without the optical zoom

Only digital Zoom is available – controlled by determination of a diagonal on the screen, and **double click** on the screen to Zoom-out. In that case, only the data which are needed to display the zoomed part of the screen are sent from the server. If the digital zoom mode is enabled,

Picture20: Digital zoom

there's a possibility to move the zoomed part of the image using screen.

Picture21: Digital zoom

- Cameras with the optical zoom / PTZ cameras

Both digital and optical Zoom modes are available (also simultaneously).

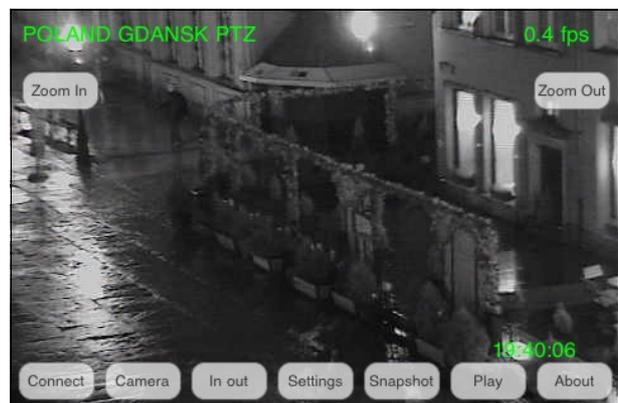

- **Optical Zoom** – PTZ control mode (see chapter **3.10 PTZ control mode**) pressing 'Zoom in' or 'Zoom out' . Amount of zoom steps depends on the camera – a „**PTZ**” label is added to camera name.

- Irrespective of the digital zoom, you can use the digital zoom-in and zoom-out controls (see chapter **3.11 Zoom**).

Picture22: Digital zoom

In that case, only the data which are needed to display the zoomed part of the screen are sent from the server. If the digital zoom mode is enabled, there's a possibility to move the zoomed part of the image using screen.

Picture23: Digital zoom

3.12 MULTIVIEW

There is a possibility to change the main display to multiview. You can do that by moving finger with straight line from bottom to up.

Picture24: Multiview

3.13 „ABOUT” WINDOW

At any moment select **About**. The window with informations about the software version, manufacturer, etc. appears. To return to Main menu press OK. .

Picture25: „About” window

3.14 CLOSING THE PROGRAM

At any moment, you can select middle button. A program will exit without confirmation screen.

When you press power button the program will work in background.
